

Access: CBool Function

Question: How do I convert a value to a boolean?

Answer: To convert a value to a boolean, use the "CBool" function. The syntax for the CBool function is:

CBool(expression)

For example:

Dim LCompare as Boolean

LCompare = CBool(1=2)

In this example CBool(1=2) would return false. The variable LCompare would now contain the value false.
