

# Access: CCur Function

---

**Question:** How do I convert a value to currency?

**Answer:** To convert a value to currency, use the "CCur" function. The syntax for the CCur function is:

CCur( expression )

For example:

```
Dim LValue As Double  
Dim LCurValue As Currency
```

```
LValue = 123.4567812  
LCurValue = CCur(LValue)
```

In this example, the CCur function would return the value \$123.46. The variable called LCurValue would now contain \$123.46.
