

Access: CDate Function

Question: How do I convert a value to a date?

Answer: To convert a value to a date, use the "CDate" function. The syntax for the CDate function is:

CDate(expression)

For example:

```
Dim LstrDate As String  
Dim LDate As Date
```

```
LstrDate = "Apr 6, 2003"  
LDate = CDate(LstrDate)
```

The function called "CDate" will convert any value to a date as long as the expression is a valid date.

In this example, the variable LDate would now contain the value 4/6/2003.
