

Access: CSng Function

Question: How do I convert a value to a single-precision number?

Answer: To convert a value to a single, use the "CSng" function. The syntax for the CSng function is:

CSng(expression)

For example:

```
Dim LValue As Single
```

```
LValue = CSng(8.53453543)
```

In this example, the LValue variable would now contain the value 8.534535.
