

Access: Day Function

In Access, the **Day** function returns the day of the month (a number from 1 to 31) given a date value.

The syntax for the **Day** function is:

Day (date_value)

date_value is a valid date.

For example:

Day (#22/11/2003#) would return 22

Day (#01/01/1998#) would return 1

VBA Code

The **Day** function can be used in VBA code. For example:

```
Dim LDay As Integer
```

```
LDay = Day(#12/03/2001#)
```

In this example, the variable called LDay would now contain the value of 12.

SQL/Queries

You can also use the **Day** function in a query.
