

# Access: Hour Function

---

In Access, the **Hour** function returns the hour of the day (a number from 0 to 23) given a time value.

The syntax for the **Hour** function is:

Hour ( time\_value )

*time\_value* is a valid time.

For example:

Hour (#10:42:58 PM#)                      would return 22

Hour (#10:42:58 AM#)                      would return 10

Hour (#22/11/2003 10:42:58 PM#)                      would return 22

## VBA Code

The **Hour** function can be used in VBA code. For example:

```
Dim LHour As Integer
```

```
LHour = Hour(#10:42:58 PM#)
```

In this example, the variable called LHour would now contain the value of 22.

## SQL/Queries

You can also use the **Hour** function in a query.
