

# Access: Minute Function

---

In Access, the **Minute** function returns the minute of the hour (a number from 0 to 59) given a time value.

The syntax for the **Minute** function is:

Minute ( time\_value )

*time\_value* is a valid time.

For example:

Minute (#10:42:58 PM#)                would return 42

Minute (#10:13:58 AM#)                would return 13

Minute (#22/11/2003 10:00:58 PM#)    would return 0

## VBA Code

The **Minute** function can be used in VBA code. For example:

```
Dim LMinute As Integer
```

```
LMinute = Minute (#10:13:58 AM#)
```

In this example, the variable called LMinute would now contain the value of 13.

## SQL/Queries

You can also use the **Minute** function in a query.
