

Access: Now Function

In Access, the **Now** function returns the current system date and time.

The syntax for the **Now** function is:

Now ()

For example:

Now() would return a value such as '22/11/2003 10:42:58 PM'

VBA Code

The **Now** function can be used in VBA code. For example:

```
Dim LValue As String
```

```
LValue = Now
```

In this example, the variable called LValue would now contain the current system date and time.

SQL/Queries

You can also use the **Now** function in a query.
