

# Access: Time Function

---

In Access, the **Time** function returns the current system time.

The syntax for the **Time** function is:

Time ()

For example:

Time() would return a value such as '10:42:58 PM'

## VBA Code

The **Time** function can be used in VBA code. For example:

```
Dim LValue As String
```

```
LValue = Time
```

In this example, the variable called LValue would now contain the current system time.

## SQL/Queries

You can also use the **Time** function in a query.
