

Access: ChDrive Statement

In Access, the **ChDrive** statement allows you to change the current drive.

The syntax for the **ChDrive** function is:

ChDrive drive

drive is the drive that you wish to change to.

Note:

The **ChDrive** lets you change the drive. If you need to change the current directory as well, try using the [ChDir statement](#).

For example:

ChDrive "S" would set the current drive to
 S

ChDrive "C" would set the current drive to
 C

VBA Code

The **ChDrive** statement can be used in VBA code. For example:

```
ChDrive "S"  
ChDir "S:\Games"
```

In this example, the current drive is set to the S drive. Then the current directory is set to S:\Games.
