

Access: Cos Function

In Access, the **Cos** function returns the cosine of an angle.

The syntax for the **Cos** function is:

Cos (number)

number is a numeric expression.

For example:

Cos (2) would return -0.416146836547142

Cos (2.51) would return -0.807088180396146

Cos (-3.25) would return -0.994129676080546

VBA Code

The **Cos** function can be used in VBA code. For example:

```
Dim LNumber As Double
```

```
LNumber = Cos (210)
```

In this example, the variable called LNumber would now contain the value of -0.883877473182372.

SQL/Queries

You can also use the **Cos** function in a query.
