

Access: Int Function

In Access, the **Int** function returns the integer portion of a number.

The syntax for the **Int** function is:

Int (expression)

expression is a numeric expression whose integer portion is returned.

Note:

If the *expression* is negative, the **Int** function will return the first negative number that is less than or equal to the *expression*.

For example:

Int (210.67) would return 210

Int (2.98) would return 2

Int (-2.98) would return -3

VBA Code

The **Int** function can be used in VBA code. For example:

```
Dim LNumber As Double
```

```
LNumber = Int (210.67)
```

In this example, the variable called LNumber would now contain the value of 210.

SQL/Queries

You can also use the **Int** function in a query.
