

Access: Chr Function

In Access, the **Chr** function returns the character based on the NUMBER code.

The syntax for the **Chr** function is:

Chr (number_code)

number_code is the NUMBER used to retrieve the character.

For example:

Chr (87) would return "W"

Chr (105) would return "i"

VBA Code

The **Chr** function can be used in VBA code. For example:

```
Dim LResult As String
```

```
LResult = Chr (87)
```

In this example, the variable called LResult would now contain the value "W".

SQL/Queries

You can also use the **Chr** function in a query.
