

Access: LCase Function

In Access, the **LCase** function converts a string to lower-case.

The syntax for the **LCase** function is:

LCase (text)

Text is the string that you wish to convert to lower-case.

For example:

LCase ("Tech on the Net") would return "tech on the net"

LCase ("124ABC") would return "124abc"

VBA Code

The **LCase** function can be used in VBA code. For example:

```
Dim LResult As String
```

```
LResult = LCase ("This is a TEST")
```

In this example, the variable called LResult would now contain the value "this is a test".

SQL/Queries

You can also use the **LCase** function in a query.
