

# Access: LTrim Function

---

In Access, the **LTrim** function removes leading spaces from a string.

The syntax for the **LTrim** function is:

**LTrim** ( text )

*Text* is the string that you wish to remove leading spaces from.

For example:

**LTrim** (" Tech on the Net") would return "Tech on the Net"

**LTrim** (" Alphabet ") would return "Alphabet "

## VBA Code

The **LTrim** function can be used in VBA code. For example:

```
Dim LResult As String
```

```
LResult = LTrim (" Alphabet ")
```

The variable LResult would now contain the value of "Alphabet ".

## SQL/Queries

You can also use the **LTrim** function in a query.
