

Access: RTrim Function

In Access, the **RTrim** function removes trailing spaces from a string.

The syntax for the **RTrim** function is:

RTrim (text)

Text is the string that you wish to remove trailing spaces from.

For example:

RTrim ("Tech on the Net ") would return "Tech on the Net"

RTrim (" Alphabet ") would return " Alphabet"

VBA Code

The **RTrim** function can be used in VBA code. For example:

```
Dim LResult As String
```

```
LResult = RTrim (" Alphabet ")
```

The variable LResult would now contain the value of " Alphabet".

SQL/Queries

You can also use the **RTrim** function in a query.
