

# Access: Space Function

---

In Access, the **Space** function returns a string with a specified number of spaces.

The syntax for the **Space** function is:

Space ( number )

*number* is the number of spaces to be returned.

For example:

**Space** (3)      would return "   "

**Space** (7)      would return "       "

## VBA Code

The **Space** function can be used in VBA code. For example:

```
Dim LResult As String
```

```
LResult = Space (5)
```

In this example, the variable called LResult would now contain the value "     ".

## SQL/Queries

You can also use the **Space** function in a query.
